

# Master 2 M2 Reliability based structural MAintenance for marine REnewable ENERgy (MAREENE)

Année universitaire 2020-2021

## Information générale

<b>Objectifs</b>	This program aims to train structural reliability, monitoring and maintenance specialists in the field of Marine Renewable Energy (MRE). At the end of this program, students will be able to use and quantify the added value of non-destructive testing techniques and SHM methods applied to offshore structures.
<b>Responsable(s)</b>	SCHOEFS FRANCK CHEVREUIL PLESSIS MATHILDE
<b>Mention(s) incluant ce parcours</b>	master Mécanique
<b>Lieu d'enseignement</b>	The majority of the first semester courses are held on the campus of the Faculty of Sciences of Université de Nantes. These courses are complemented by e-learning courses delivered by partner universities. The second semester can be held at the University of Nantes or in one of the partner universities (attachment). Courses can be taught at ENSM. Shared modules with the Ecole Centrale de Nantes can be offered on its campus, 2 km away.
<b>Langues / mobilité internationale</b>	The programme is taught in English. In the case of this Master, students will be able to carry out internships or projects abroad, and especially in partner universities.
<b>Stage / alternance</b>	In the first semester of the Master 2 there is a group project that lasts about two months. It is a tutored project realized within the University. The internship or project (in the second semester) lasts at least 4 months and maximum 6, in accordance with European rules. In accordance with French law, internships are therefore paid.
<b>Poursuite d'études /débouchés</b>	Sectors: <ul style="list-style-type: none"> <li>• Energy sector, Marine and Renewable Energy, electricity, gas, oil, nuclear</li> <li>• Higher education and research</li> </ul> Occupations: <ul style="list-style-type: none"> <li>· Higher education and academic research</li> <li>· Research and Development functions</li> <li>· Project Manager</li> <li>· Structural Health Monitoring (SHM) specialists</li> <li>· Researcher (after a PhD)</li> </ul>
<b>Autres renseignements</b>	This course is one of those offered by the Master of Mechanics, co-accredited by the Faculty of Sciences of Université de Nantes and Centrale Nantes
<b>Conditions d'obtention de l'année</b>	Graduation is subject to European rules (average over the year, compensation between the EU, except that there is no compensation between semesters, that is to say that the average (10/20) is required in both S1 and S2.

Obtention de l'UE	
<b>Programme</b>	
Objectifs (résultats d'apprentissage)	<p>Knowledge</p> <ul style="list-style-type: none"> <li>• Understand the nature of wind: wind profile, mean wind, extreme wind, turbulence, turbulence field - for applications for structures such as buildings, bridges and wind turbines.</li> <li>• Understand modelling and calculation of wind loads on civil engineering structures</li> <li>• Be able to calculate static and dynamic wind loads on buildings.</li> <li>• Be able to assess cross-wind load actions such as rhythmic vortex shedding and galloping.</li> <li>• Be able to assess structures exposed to wind load in ULS and SLS (comfort).</li> <li>• Be able to apply rules for wind actions in design codes.</li> <li>• Use correct professional terminology.</li> </ul> <p>Competencies</p> <ul style="list-style-type: none"> <li>• Be able to model, calculate and communicate wind loads on civil engineering structures.</li> </ul>
Contenu	Introduction to wind loads on structures/ Static wind loads/ Dynamic wind loads (along wind)/ Dynamic wind loads (across wind)/ Windloads on complex structures
Méthodes d'enseignement	e-learning Lectures, etc. supplemented with project work, workshops, presentation seminars, lab tests
Langue d'enseignement	Anglais
Bibliographie	

<b>X3PR100</b>	<b>Stochastic theory of Sealoads</b>
Lieu d'enseignement	Université de Nantes
Niveau	Master
Semestre	3
Responsable de l'UE	LEIRA Bernt
Volume horaire total	<b>TOTAL : 34h Répartition : CM : 13.5h TD : 10.5h CI : 0h TP : 0h EAD : 10h</b>
<b>Place de l'enseignement</b>	
UE pré-requis(s)	
Parcours d'études comprenant l'UE	M2 Reliability based structural MAintenance for marine REnewable ENergy (MAREENE)
<b>Evaluation</b>	
Pondération pour chaque matière	Stochastic theory of Sealoads <b>100%</b>
Obtention de l'UE	
<b>Programme</b>	
Objectifs (résultats d'apprentissage)	<ul style="list-style-type: none"> <li>• To have detailed knowledge of statistical methods and of the basis for description of stochastic processes. This includes detailed knowledge of the topics given in the academic content.</li> <li>• To be able to make simple calculations of stochastic loads on and responses of marine structures.</li> <li>• To master the concepts and terminology which are used in statistical methods and in the description of stochastic processes and how this is applied in marine technology.</li> <li>• To have detailed knowledge of the basic principles and methods which are used to describe stochastic processes with the emphasis on the applications to sealoads and motions of marine systems.</li> </ul>

Contenu	<ul style="list-style-type: none"> <li>• Transformation of random variables.</li> <li>• Monte Carlo simulation.</li> <li>• Probability distributions for response.</li> <li>• Parameter-estimation.</li> <li>• Extreme-value statistics.</li> <li>• Stochastic processes.</li> <li>• Auto- and cross-correlation functions. Spectra and cross-spectra.</li> <li>• Differentiation of stochastic processes.</li> <li>• Excitation-response of stochastic processes. Response-statistics.</li> </ul>
Méthodes d'enseignement	E-learning Virtual classes/videos, online exercices
Langue d'enseignement	Anglais
Bibliographie	D.E. Newland: An introduction to random vibrations, spectral and wavelet analysis, 3rd edition, 1993. D. Myrhaug: Lecture notes. B. Leira: Lecture notes.

<b>X3LA010</b>	<b>Préparation au toEIC</b>
Lieu d'enseignement	FST-Lombarderie
Niveau	Master
Semestre	3
Responsable de l'UE	KERVISION SYLVIE
Volume horaire total	<b>TOTAL : 0h Répartition : CM : 0h TD : 0h CI : 0h TP : 0h EAD : 0h</b>
<b>Place de l'enseignement</b>	
UE pré-requis(s)	
Parcours d'études comprenant l'UE	M2 Chimie Moléculaire et Thérapeutique (CMT),M2 Mathématiques Fondamentales et Appliquées - Algèbre et Géométrie (MFA-AG),M2 Ingénierie Statistique (IS),M2 CMI-IS,M2 Modélisation, Analyse numérique et Calcul Scientifique (MACS),M2 Ingénierie des Systèmes d'Information (ISI),M2 Mécanique et Fiabilité des Structures,M2 Sciences et techniques aux époques moderne et contemporaine,M2 Génétique, Génomique & Biologie des Systèmes (GGBS),M2 Biologie, Biotechnologie & Recherche Thérapeutique (BBRT),M2 Recherche Clinique,M2 Capteurs Intelligents et Qualité des Systèmes Electroniques,M2 Pilotage des Systèmes d'Information (PSI),M2 Génétique, Génomique & Biologie des Systèmes (GGBS),M2 CMI-ICM,M2 Gestion des Risques, Santé, Sécurité, Environnement (GRiSSE),M2 Modélisation en Pharmacologie Clinique et Epidémiologie (MPCE),M2 Biologie, Biotechnologie & Recherche Thérapeutique (BBRT),M2 Rayonnements Ionisants et Applications médicales (RIA),M2 Démantèlement et Modélisation Nucléaires (DMN),M2 Recherche en Physique Subatomique (RPS),M2 CMI-INA,M2 Préparation Supérieure à l'Enseignement (PSE),M2 Mathématiques Fondamentales et Appliquées - Analyse et Probabilités (MFA-AP),M2 Nanosciences, Nanomatériaux, Nanotechnologies (CNano),M2 Energies Nouvelles et Renouvelables (ENR) - option Gestion de l'énergie,M2 Energies Nouvelles et Renouvelables (ENR) - option Dispositifs pour l'énergie,M2 Analyse, Molécules, Matériaux, Médicaments (A3M) ,M2 Histoire culturelle des sciences et techniques, humanités numériques et médiations,M2 Conception et Réalisation des Bâtiments,M2 Travaux Publics et Maintenance,M2 Travaux publics et Maritimes,M2 Chimie Moléculaire et Thérapeutique (CMT) par alternance,M2 Reliability based structural MAintenance for marine REnewable ENergy (MAREENE)
<b>Evaluation</b>	
Pondération pour chaque matière	Préparation au toEIC <b>100%</b>
Obtention de l'UE	
<b>Programme</b>	
Objectifs (résultats d'apprentissage)	<p>A l'issue de cet enseignement, les étudiants seront capables de :</p> <ul style="list-style-type: none"> <li>• Reconnaître et anticiper les formats de certifications en anglais.</li> <li>• Compléter les réponses exigées par les tests de certifications.</li> <li>• Pouvoir optimiser leurs résultats aux certifications grâce à une méthodologie de travail appliquée lors des séances d'entraînement.</li> </ul> <p>At the end of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Recognize and anticipate certification formats in English.</li> <li>• Complete the answers required by the certification tests.</li> <li>• To be able to optimize their results to certifications thanks to an applied work methodology during training sessions.</li> </ul>

Contenu	<p><i>Se préparer pour obtenir une certification en anglais (objectif B2 et +)</i></p> <ul style="list-style-type: none"> <li>• Présentation des formats</li> <li>• Exercices d'entraînement</li> <li>• Conseils pour optimiser son score</li> </ul> <p><i>Prepare to obtain certification in English (objective B2 and +)</i></p> <ul style="list-style-type: none"> <li>• Presentation of formats</li> <li>• Training exercises</li> <li>• Tips to optimize your score</li> </ul>
Méthodes d'enseignement	Distanciel
Langue d'enseignement	Français
Bibliographie	<ul style="list-style-type: none"> <li>• 200% TOEIC 2017 Listening &amp; Reading (2 août 2016, de Michael Byrne et Michelle Dickinson)</li> <li>• TOEIC® La Méthode Réussite (20 janvier 2011, de David Mayer et Serena Murdoch Stern)</li> <li>• Tactics for TOEIC® Listening and Reading Test (13 septembre 2007, de Grant Trew)</li> <li>• Cambridge Grammar and Vocabulary for the TOEIC Test (11 novembre 2010, de Jolene Gear et Robert Gear)</li> </ul>

<b>X3PR110</b>	<b>FLE (French as a Foreign Language)</b>
Lieu d'enseignement	Université de Nantes
Niveau	Master
Semestre	3
Responsable de l'UE	
Volume horaire total	<b>TOTAL : 0h Répartition : CM : 0h TD : 0h CI : 0h TP : 0h EAD : 0h</b>
<b>Place de l'enseignement</b>	
UE pré-requis(s)	
Parcours d'études comprenant l'UE	M2 Reliability based structural MAintenance for marine REnewable ENERGY (MAREENE)
<b>Evaluation</b>	
Pondération pour chaque matière	FLE (French as a Foreign Language) <b>100%</b>
Obtention de l'UE	
<b>Programme</b>

<b>X1PM060</b>	<b>Fluid Dynamics</b>
Lieu d'enseignement	Faculté des Sciences de Nantes
Niveau	Master
Semestre	1
Responsable de l'UE	CARPY SABRINA
Volume horaire total	<b>TOTAL : 52h Répartition : CM : 20h TD : 16h CI : 0h TP : 12h EAD : 4h</b>
<b>Place de l'enseignement</b>	

UE pré-requise(s)	Mécaniques des fluides
Parcours d'études comprenant l'UE	M1 Mécanique et Fiabilité des Structures, M1 CMI-ICM, M2 Reliability based structural MAintenance for marine REnewable ENergy (MAREENE), M2 International Master in Planetary Geosciences
<b>Evaluation</b>	
Pondération pour chaque matière	Fluid Dynamics <b>100%</b>
Obtention de l'UE	Les notes de pratique à la deuxième session correspondent à un report des notes de pratiques de la première session. The practice notes for the second session are a carry-over from the practice notes of the first session.
<b>Programme</b>	
Objectifs (résultats d'apprentissage)	<p>A l'issue de cette U.E., L'étudiant :</p> <ul style="list-style-type: none"> <li>• schématise et modélise un écoulement réel grâce à la méthode des fonctions potentiels et fonctions de courant de l'aérodynamique</li> <li>• met en équation un problème de dynamique des fluides</li> <li>• simplifie le problème à l'aide des hypothèses du problème et si besoin, grâce à une analyse dimensionnelle</li> <li>• détermine les solutions à l'aide des conditions aux limites et des conditions initiales</li> <li>• est capable d'appréhender les différences entre un fluide parfait et réel, laminaire et turbulent, stationnaire et instationnaire et de faire le lien entre la théorie et la pratique lors des séances de travaux pratiques</li> <li>• rédige un rapport détaillé sur les expériences réalisées en travaux pratiques dans un document synthétique avec des outils scientifiques adaptés (réalisation de schéma, écriture des équations,...) par groupe de deux ou trois</li> </ul> <p><b>Learning outcomes :</b></p> <ul style="list-style-type: none"> <li>- model a fluid dynamics problem</li> <li>- simplify the problem using the hypotheses of the problem and, if necessary, through a dimensional analysis</li> <li>- determine solutions using boundary conditions and initial conditions</li> <li>- understand the differences between a perfect and real fluid, laminar and turbulent, stationary and unsteady</li> <li>- schematize and models a real flow using the method of potential and current functions of aerodynamics</li> <li>- write a transport equation for temperature or concentration</li> <li>- write a detailed report on the experiments carried out in practical work in a synthetic document with adapted scientific tools (making a diagram, writing equations, etc.) in groups of two or three students</li> </ul>
Contenu	<p>-Fondamentaux de la mécanique des fluides (propriétés d'un fluide, cinématique des fluides, équation de Bernoulli, vorticit�, fluide visqueux,...)</p> <p>-Solution des probl�mes d'�coulement des fluides mod�lis�s par des �quations diff�rentielles (�quation d'onde, �quation de diffusion, �quation de Laplace)</p> <p>-Application aux �coulements � surface libre et aux couches limites</p> <p>-Travaux pratiques : �coulement laminaire dans une conduite, �coulement turbulent dans une conduite, �coulement autour d'un cylindre, mesures exp�rimentales de forces a�rodynamiques sur des profils d'ailes.</p> <p><b>Programme's content :</b></p> <p>-Fundamentals of fluid mechanics (properties of a fluid, kinematics of fluids, Bernoulli's equation, vorticity, viscous fluid)</p> <p>-Solution of fluid-flow problems that are modelled by differential equations (wave equation, diffusion equation, Laplace's equation)</p> <p>-Application to Water waves and Boundary layers</p> <p>-Practical work: laminar flow in a pipe, turbulent flow in a pipe, flow around a cylinder in a wind tunnel, experimental measurements of aerodynamic forces on wing profiles.</p>
M�thodes d'enseignement	Lectures, tutorials, practical work, distance learning, project mode
Langue d'enseignement	Anglais
Bibliographie	M�canique des fluides, �l�ments d'un premier parcours, Chassaing, C�padu�s �ditions ; Hydrodynamique Physique, Guyon, Hulin et Petit, CNRS �ditions.

<b>X4PR010</b>	<b>Internship or project and workshops</b>
Lieu d'enseignement	
Niveau	Master

Semestre	4
Responsable de l'UE	CHEVREUIL PLESSIS MATHILDE
Volume horaire total	<b>TOTAL</b> : 31h Répartition : <b>CM</b> : 0h <b>TD</b> : 0h <b>CI</b> : 0h <b>TP</b> : 0h <b>EAD</b> : 31h
<b>Place de l'enseignement</b>	
UE pré-requis(s)	Problem Based learning
Parcours d'études comprenant l'UE	M2 Reliability based structural MAintenance for marine REnewable ENergy (MAREENE)
<b>Evaluation</b>	
Pondération pour chaque matière	Internship or project and workshops <b>100%</b>
Obtention de l'UE	
<b>Programme</b>	
Objectifs (résultats d'apprentissage)	<p>At the end of this teaching unit, the student:</p> <ul style="list-style-type: none"> <li>• Solves a problem of industrial mechanics or research within a team</li> <li>• Identifies the methods necessary for solving</li> <li>• Models the problem posed and justifies the assumptions made</li> <li>• Produce a bibliography on the subject</li> <li>• Solve the problem and comment on the validity of its results</li> <li>• Complies with the requirements (rules, standards, means, communication) of the company or laboratory</li> <li>• Produces an internship report</li> <li>• Present his work orally</li> </ul> <p>Workshops:</p> <ul style="list-style-type: none"> <li>• Develop and practice peer feedback skills</li> <li>• Practice collaborative learning in a group</li> <li>• Design an action plan to deal with an initial individual challenge or curiosity</li> <li>• Practice presentation skills</li> <li>• Practice critical skills by giving feedback to peers</li> <li>• Reflect on hisr own skills and those of peers</li> </ul>
Contenu	<ul style="list-style-type: none"> <li>• The internship lasts between 4 and 6 months. It takes place either in a company or in a laboratory. In accordance with the French law the internship is paid.</li> <li>• The student is in charge of finding his internship. Proposals are addressed throughout the first semester but he can also find the internship by himself.</li> <li>• The choice of an internship must be validated by the training manager in order to verify the suitability of its content with training.</li> </ul>
Méthodes d'enseignement	<p>Internship or project in company or laboratory with follow-up by the supervisor and an academic tutor.</p> <p>Writing and defense of a thesis</p> <p>Collaborative online activities / seminars</p>
Langue d'enseignement	Anglais
